## **Decisioneering Services to Provide Clients With Risk Analysis Expertise**

*Consulting services to support Six Sigma clients' critical business decisions*

**Denver, October 27, 2005** – Decisioneering®, Inc., an innovator of software and services for risk analysis and optimization, today announced it has partnered with Vose Consulting US, LLC, to launch Decisioneering Services, an offering that will provide Six Sigma practitioners with the solutions they need to successfully complete their risk analysis projects.

Companies make critical business decisions under uncertainty everyday. However, they often lack resources, expertise and time when trying to use risk analysis to solve complex problems. Decisioneering Services now offers onsite and offsite consulting allowing clients to quickly get the business results they need.

“Understanding uncertainty and risk is very important in business,” said Jim Franklin, CEO of Decisioneering. “Decisioneering Services team will provide tailored support so that companies can benefit from risk analysis immediately.”

Decisioneering Services provides customers with a comprehensive range of onsite and offsite solutions such as:

- Modeling expertise for complex risk problems
- Crystal Ball model-building, report creation and presentation of results to management
- Risk management and help identifying and prioritizing risks
- Regional or on-site Crystal Ball training

Decisioneering Services' decision-focused approach works within the clients' time and resource constraints. Further, each consulting engagement allows customers the ability to learn appropriate risk analysis tools and techniques which they can then apply to future projects.

“Our aim is always to provide a supportive role so that the client keeps control of the project, understands and learns from what we do and ultimately has confidence in, and therefore makes good use of the results we produce,” said David Vose, partner of Vose Consulting. “Partnering with Decisioneering will give our clients the software, tools, training and consulting services they need to gain the upper hand on risk.”

Benefits of Decisioneering Services include:

- Accurate, clear and defensible risk analyses
- Getting the answers quickly by hiring an expert to model difficult or large business problems
- Having ready-to-run models and templates that can be applied and expanded for future projects
- Giving customers the ability to make the analysis and application of results their focus, not the intricacies of building models
- Learning how to vividly present and communicate analysis results by understanding risk analysis theory and tools
